

How to get the extra 2 gigz from your original xbox HD (v0.3) - Thanks To Xbox-scene.com

Note: This Only works with the 10GB Segate drives. The WD drives are only 8GB!

Poweslave. . .

Tutorial written by : Robizzle

This tutorial was tested on an xbox modded with a Matrix chip and evox dashboard V1.8.2812 but should work with any modded box with that dashboard or higher/newer version.

What you need:

- 1) Modded xbox with evox dash (1.8.1812 or later) installed
 - 2) A 10 gig hdd (I think the only one xbox shipped with is the segate)
 - 3) FTP ability and knowhow
 - 4) About 10 min
- 1) Connect your pc to your xbox using your favorite ftp client (I like FlashFXP)
 - 2) Create A backup copy of your evox.ini file (i saved mine to my desktop)
 - 3) Create a new evox.ini based on your backup and replace everything under "[Menu]" with :

For EvolutionX version 1.8.2594 till v1.8.3285

Section "Root"

```
{  
Item "MS Dashboard",@3  
Item "Reboot",@5  
Item "Power Off",@10  
Item "Format F:",@210  
  
}
```

[Action_10]

Info "Format F"

Warning "This will format F"

Progress "Formatting F"

#

This will format F:\

#

Format f:

For EvolutionX v1.8.3682 or higher (newer)

Section "Root"

```
{  
Item "MS Dashboard",ID_MS_Dash  
Item "Reboot",ID_Quick_Reboot  
Item "Power Off",ID_Power_Off  
Item "Format F:",@210  
  
}
```

[Action_10]

Info "Format F"

Warning "This will format F"

Progress "Formatting F"

#

This will format F:\

#

Format f:

4) Save your changes and ftp it back to the xbox. (or in FlashFXP you could just open it in edit mode)

5) Reboot your xbox, select "Format F:"

6) Select Yes (warning anything on F:\ will be erased)

7) Wait 1/2 a second

8) FTP your original evox.ini file

9) Reboot

10) umm there is no #10.
